Press Release - 1st Project Webinar

Cooperation on Skills Agenda

Reaching-out to sectoral stakeholders

On mid-March, the DRIVES project progresses to an important milestone for collecting evidence from the automotive sector on their expectations to satisfy the short- and medium-term skills needs.

Aiming at delivering automotive sector-specific solutions under the blueprint framework set by the European Commission in the European Skills Agenda, DRIVES consortium looks into bringing results driven and owned by the automotive sector stakeholders.

The DRIVES project is organising its first webinar to introduce the project strategy and its stakeholder's questionnaire. This initiative is part of DRIVES intelligence research effort, by which the consortium aims to provide analysis of the sector trends regarding skills and trainings, to the benefit of the automotive sector.

The questionnaire is a relevant element for the definition of DRIVES' recommendations to the skills strategy and the understanding of the sector preferences for designed provisions for vocational and education training.

Automotive stakeholders can join the webinar on 14th March 2019 at 11:00 CET through the available access point <https://join.freeconferencecall.com/drives-survey>. The webinar will be recorded and later shared.

Further information on the questionnaire, can be addressed to your DRIVES contact or to survey@project-drives.eu.

DRIVES is a European project and Sector Skills Alliance (SSA) into the Automotive field, covering all levels of the value chain (vehicle production, automotive suppliers and automotive sales and aftermarket services).

The project runs from 2018 to 2021 with a budget of 4 million euros and involves 24 European partners, including public entities, European sectorial associations, VET schools and Universities, from 11 EU partner countries. The main goal is to develop concrete actions to satisfy short- and medium-term skills needs to support the overall sectorial strategy and you can find more detailed information at www.project-drives.eu.
